

MICROCUT® CCA

For high demands in microerosion

- The microcut® CCA EDM wire is suitable for high demands in microerosion
- Combines the best properties of cobracut® and microcut®, thereby providing reproducible results with best surface quality, even in case of very small energy impulses
- Due to its high tensile strength and minimal tolerance of the wire diameter particularly suited for precise fine contours

Technical data

Core	CuZn36
Coating	Zn treated
Tensile strength	1.000 MPa / 145,000 PSI
Elongation	1%
Color	Grey

Delivery program
